Am I normal?

It all started with the question "Did you need psychiatrist during your stay at IITB?". Although majority of the students did not need psychiatrists but a huge chunk of the students admitted that they needed but did not go for a checkup

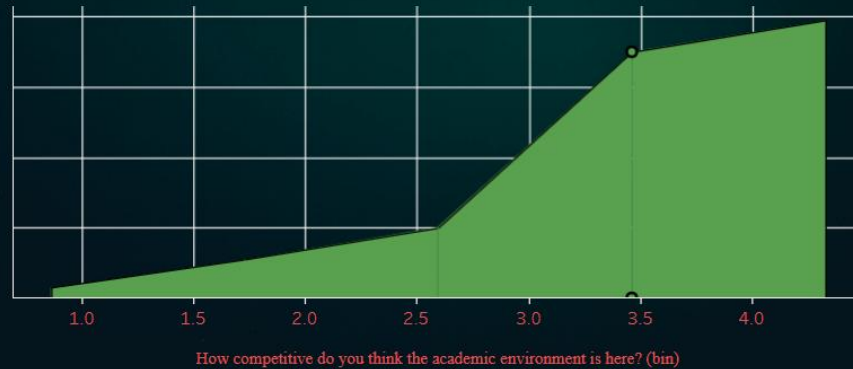

On the survey many students mentioned that if they could they would rather not attend the classes .

Identifying the cause

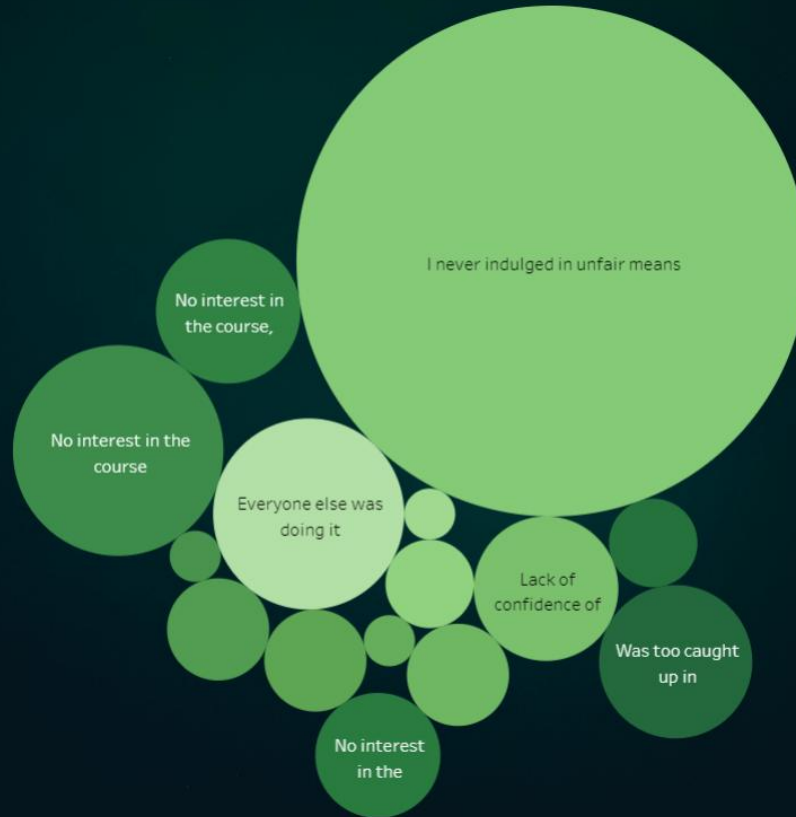

too many assignments, projects exams along with peer pressure seems to be a major cause for stress and anxiety. The environment is too competitive which is not a bad thing, but sometimes it decreases the confidence and morale of the students

Consequences!

according to the survey many students got indulged into unfair practises as they could not cope up or may be due to lack the confidence

Students faces several kinds of stresses that develops into anxiety and finally leads to depressions.They find it difficult to recover from.It affects their health directly and indirectly.Students might smoke and drink out of depression,In the survey although majority of students said that tehy did not smoke some said that they needed a smoke atleast once a day
